

AnalogIST is the collaborative space for ezPAARSE users. It was designed to facilitate contributions to the analysis of scientific literature publishers' platforms and the pooling of such contributions. An analysis is the report statement of the different URLs displayed when a user browses on a platform and carries out different tasks such as consulting an abstract or downloading a PDF article. It is used as the basis for the creation of an ad hoc parser which can be activated at the right moment by ezPAARSE to produce consultation indicators linked to these tasks.

Compute your logs

ezPAARSE enables the measurement of user access to digital resources on publishers' web platforms. To do this it analyses locally-collected access log files.
